Presentation – Jason Hewitt – ASPE Water Demand Calculator

ASPE has been working on updating the Water demand calculator
Water calculations are based on the 1940's Hunters Curve Data
Hunters Curve is overly conservative, in the 1940's there was not
a lot of Data to work with

Hunters Curve was developed using data from hotels of the time
New water surveys were done between 1996 -2011 using 2800
households monitored for 11,350 hours

Discussed the methods used to track data for a more accurate
demand calculator

Using the data and research they have developed new standards
for peak water demand calculations and flow rates

They are developing a app that workers can have at their disposal
at all times

New calculator will be in the 2018 UPC code book in Appendix M
Discussion Question and answer period followed
